

ZOTEFOAMS

EUROPEAN AUTOMOTIVE DESIGN – TECHNOLOGY ROADSHOW

- **Zotefoams** will be participating in the **EADTR** during March 2007, bringing the exhibition to the customer.
- The Roadshow presents new technologies to the automotive engineers from 22 organisations.
- The major focus of the **Zotefoams** display will be the new **ZOTEK N** polyamide foam. A first to the market offering an impressive combination of performance and processing and suitable for numerous diverse applications such as energy management and insulation. Along side this will be the **Azote** crosslinked polyolefin foams. With their long and successful pedigree in automotive components, such as gasketing and acoustic trapping devices, these benchmark products provide a springboard for applications of the new high temperature **ZOTEK N** range.
- Representatives with both technical knowledge and experience of automotive applications will be available at all venues as well as for meetings each day after the exhibition has closed.
